MDI form
Step 1
Create menu options
1. Drag and drop menustrip control
2. Create the required menu options
Step 2
Goto the "form" properties and set IsMdiContainer to True
Step 3
Create the required child forms – childform1, childform2, childform3
Step 4
Write appropriate click events for the menu options
Set the relationship between parent, child using
MdiParent property   -   c.mdiParent=this;
Step 5
For the last option Window
Goto menuStrip1 control ,MdiWindowListItem property should be assigned as
WindowToolStripMenuItem

Property Table - List of properties to be changed

Sno	Control Name	Property	Value
1	fileToolStripMenuItem	Name	mnufile
		Text	File
2	CombodemoToolStripMenuItem	Name	mnucombo
		Text	Combobox Demo
3	checkboxToolStripMenuItem	Name	mnucheck
		Text	Checkbox Radiobutton Demo
4	openToolStripMenuItem	Name	mnuopen
		Text	Open Child form3
5	activeToolStripMenuItem	Name	mnuactive
		Text	Active Child
6	cascadeToolStripMenuItem	Name	mnucascade
		Text	Cascade
7	horizontalToolStripMenuItem	Name	mnuhorizontal
		Text	Horizontal
8	verticalToolStripMenuItem	Name	mnuvertical
		Text	Vertical
		Text	Active Child

```csharp
using System;
using System.Collections.Generic;
using System.ComponentModel;
using System.Data;
using System.Drawing;
using System.Text;
using System.Windows.Forms;

namespace WindowsFormsApplication1
{
    public partial class frmmdi : Form
    {

        public frmmdi()
        {
            InitializeComponent();
        }

        private void mnucombo_Click(object sender, EventArgs e)
        {    combobox c = new combobox();
            c.MdiParent = this;// this sets the parent child relationship
            c.Show();
```

```csharp
            c.Text = "Child Form 1 : Combobox Demo "  ;
        }

        private void mnuactive_Click(object sender, EventArgs e)
        {
            MessageBox.Show("Current active form is"+this.ActiveMdiChild.Text,"MDI
FORM" );
        }
